

GovReady CyberOps: Business Concept and Service Model

Prepared for Government Contracting Cohort Planning

July 11, 2026

1 Business Concept

GovReady CyberOps is a proposed cybersecurity and automation services company focused on helping small businesses, local organizations, and government contractors improve their cybersecurity readiness, automate repetitive workflows, and prepare for government contracting opportunities.

The company combines two major service areas:

1. **Cyber Readiness:** Helping organizations improve their security posture through assessments, documentation, lightweight monitoring, and practical security recommendations.
2. **Process Automation:** Helping organizations save time by converting manual, repetitive, or inefficient processes into scripts, dashboards, templates, or small internal tools.

2 Core Positioning Statement

GovReady CyberOps helps small businesses and government contractors improve cybersecurity readiness, automate repetitive workflows, and prepare for government contracting requirements.

3 Why This Business Makes Sense

Small businesses and contractors often want to sell to the government but lack the internal cybersecurity maturity, documentation, and operational efficiency needed to compete confidently. Many of these organizations do not need a large enterprise security platform. Instead, they need practical help with the basics: asset inventory, access control, backups, logging, policies, incident response planning, and efficient workflows.

This business is designed to fill that gap by offering practical cybersecurity services and lightweight automation solutions that are affordable, understandable, and directly useful.

The business model aligns well with current public guidance. NIST provides Cybersecurity Framework 2.0 resources specifically for small businesses, including a quick-start guide for small and medium-sized businesses with modest or no cybersecurity plans in place. CISA also provides voluntary Cybersecurity Performance Goals intended to help small and medium-sized organizations prioritize high-impact cybersecurity actions. In addition, SAM.gov explains that entities must register if they want to directly bid on government contracts or apply for federal assistance.

4 Target Customers

- Small government contractors
- Businesses preparing to register or compete for government contracts
- Local government offices
- Small municipalities
- Nonprofits receiving grants or public funding
- Small schools or education programs
- Managed service providers that need cybersecurity or automation support
- Small technical teams with repeated manual processes

5 Primary Value Proposition

We help small organizations become more secure, more organized, and more efficient by combining cybersecurity readiness with practical workflow automation.

The company does not only identify security problems. It also helps simplify operations by building small tools and workflows that save time and make security easier to maintain.

6 Service Pillars

6.1 Pillar 1: Cyber Readiness

This service area focuses on helping organizations understand and improve their security posture.

Example deliverables:

- Cybersecurity readiness assessment
- Asset inventory review
- MFA and password policy review
- Backup and recovery review
- Basic vulnerability scan and prioritized remediation list
- Network and endpoint security checklist
- Incident response starter plan
- Cybersecurity gap analysis report
- Executive summary for non-technical leadership

6.2 Pillar 2: Process Automation

This service area focuses on identifying slow, repetitive, or manual workflows and replacing them with simple automation.

Example deliverables:

- Internal dashboards
- Report generators
- Ticket or support templates
- Log parsing scripts
- File organization tools
- Email or document automation
- Workflow forms that generate reports or checklists
- Small web applications for internal use
- Data cleanup and formatting tools

6.3 Pillar 3: Lightweight Monitoring

This service area helps small organizations gain basic visibility without deploying a large enterprise SIEM.

Example deliverables:

- Centralized syslog collection
- Basic security dashboard
- Alerts for important events
- Monthly log review summary
- Basic network visibility
- Documentation of monitored systems
- Recommendations based on observed activity

6.4 Pillar 4: Government Contractor Preparation

This service area helps businesses organize the cybersecurity and operational documents often needed when preparing for government contracting.

Example deliverables:

- Security policy templates
- Acceptable use policy
- Access control policy

- Backup policy
- Incident response plan
- Vendor/security questionnaire preparation
- Basic contractor readiness checklist
- Documentation package for internal organization

7 Proposed Service Packages

Package	Purpose	Included Deliverables
Starter Cyber Readiness Assessment	Entry-level service for organizations that need to understand their security posture.	Asset review, MFA/password review, backup review, basic vulnerability scan, prioritized findings, 30-day improvement plan.
Operations Automation Package	For organizations with slow, repetitive, or manual internal workflows.	Process review, workflow design, script/tool/dashboard creation, documentation, handoff session.
Monitoring Lite	For small organizations that need basic visibility without a full SOC.	Syslog setup, basic dashboard, alert rules, monthly summary, improvement recommendations.
Gov Contractor Prep Package	For businesses preparing to sell to government or improve contractor readiness.	Security policies, incident response plan, backup policy, access control documentation, readiness checklist.

8 Differentiator

The main differentiator is the combination of cybersecurity and automation. Many cybersecurity companies only provide assessments or reports. GovReady CyberOps would also help fix operational inefficiencies by building practical tools that reduce manual work.

The company specializes in finding inefficient manual processes and turning them into simple tools, scripts, dashboards, or workflows that save time while improving security and documentation.

9 Example Problems the Company Solves

- A small contractor does not know if its systems are secure enough to pursue government work.
- A local office tracks security tasks manually in spreadsheets and needs a better workflow.
- A small business has no incident response plan or written security policies.
- An organization has network devices and servers but no centralized logging.

- A support team repeatedly writes the same emails, reports, or ticket notes manually.
- A business wants to prepare for government contracting but lacks organized documentation.

10 Sample One-Sentence Pitch

GovReady CyberOps helps small businesses and government contractors become more secure, more efficient, and better prepared for government opportunities through cybersecurity readiness assessments, practical automation, and lightweight monitoring.

11 Sample Elevator Pitch

GovReady CyberOps is a cybersecurity and automation services company for small businesses and government contractors. We help organizations improve their cybersecurity readiness, build practical security documentation, centralize basic monitoring, and automate repetitive workflows that waste time. Our goal is to make small organizations more secure, more organized, and more prepared to compete for government opportunities.

12 Potential Business Names

- GovReady CyberOps
- GovReady Cyber Automation
- CivicShield Automation
- SecureOps Readiness
- Contractor CyberOps
- GovReady Systems
- CyberReady Automation Group

13 Recommended Name

GovReady CyberOps is the strongest option because it communicates three important ideas:

- **GovReady:** The company helps clients prepare for government contracting or government-facing work.
- **Cyber:** The company focuses on cybersecurity readiness.
- **Ops:** The company also improves operations through automation and process improvement.

14 Early Go-To-Market Strategy

14.1 Phase 1: Simple Offer

Start with one clear offer:

Cyber Readiness and Automation Assessment for Small Government Contractors.

This should be a fixed-scope service that produces a short report, a prioritized improvement plan, and one automation opportunity.

14.2 Phase 2: Build Repeatable Templates

Create reusable templates for:

- Security assessments
- Asset inventory
- Backup review
- Incident response plan
- Access control policy
- Monthly security summary
- Automation discovery questionnaire

14.3 Phase 3: Add Automation Projects

After the assessment, sell small automation projects as follow-up work. These can include dashboards, scripts, workflow forms, or report generators.

14.4 Phase 4: Monthly Retainer

Offer a monthly package for clients that need continued support.

Possible monthly services:

- Monthly security review
- Log review
- Patch/vulnerability summary
- Documentation updates
- Small automation improvements
- Security awareness support

15 Possible NAICS Codes to Research

The following NAICS areas may be relevant and should be researched before registration or proposal writing:

- Computer Systems Design Services
- Custom Computer Programming Services
- Administrative Management and General Management Consulting Services
- Other Computer Related Services

16 Risks and Clarifications

- The company should avoid presenting itself as a compliance authority unless certified or qualified for a specific compliance framework.
- The first version should focus on readiness, documentation, basic security, and operational automation.
- Advanced compliance areas such as CMMC, FedRAMP, or formal audits should be treated carefully and may require partnerships or additional expertise.
- The company should use clear, fixed-scope packages to avoid unlimited consulting work.

17 Initial Website or Capability Statement Language

17.1 Company Description

GovReady CyberOps provides cybersecurity readiness, lightweight monitoring, and process automation services for small businesses, government contractors, and local organizations. The company helps clients identify security gaps, organize documentation, improve operational workflows, and build practical tools that reduce manual work.

17.2 Core Capabilities

- Cybersecurity readiness assessments
- Security documentation and policy development
- Lightweight log monitoring and dashboards
- Workflow automation and internal tools
- Vulnerability and patch reporting
- Incident response starter planning
- Contractor readiness support

17.3 Customer Benefit

Clients receive practical, understandable, and actionable improvements that help them become more secure, more efficient, and better prepared for government contracting opportunities.
